AGD Post-Test

**Gordon J. Christensen**  
**PRACTICAL CLINICAL COURSES**

**PROCEDURE FOR RECEIVING**  
**CE CREDIT FOR VIDEO COURSES**

1. Complete the enclosed Post-Test.\* For each **CE Video Purchased**, one test is included. If additional tests are needed, the following fees will apply: \$25 per test for 1 additional dentist; \$10 per test for each auxiliary (dental assistants, hygienists, lab technicians - no limit on auxiliary tests). Fees can be paid either by check or credit card when tests are submitted to Practical Clinical Courses.
2. Complete the demographic information located at the end of the test.  
**Type of Credit:**
  - a. If the applicant selects "State," PCC will issue a certificate of verification to the applicant. The applicant must then submit this certificate to their state board to obtain credit.
  - b. If the applicant selects "AGD," PCC will submit credit information to the Academy of General Dentistry and confirmation to the applicant that it has been submitted (the applicant may check their AGD transcript for verification – please allow 30 days).
  - c. If the applicant selects "Both," PCC will complete a. & b. above.
3. Return the **Post-Test portion** via mail, fax, or email. Our contact information is as follows:

**Practical Clinical Courses**  
**3707 N Canyon Road**  
**Suite 3D**  
**Provo, UT 84604**  
**Fax: (801) 226-8637**  
[info@pccdental.com](mailto:info@pccdental.com)

4. Practical Clinical Courses will correct the Post-Test. **Passing scores are 70% or higher.**

***\*TO OBTAIN CE CREDIT ONLINE:*** Login or create an account on [www.pccdental.com](http://www.pccdental.com) and select "My CE Tests" from the left-side menu. Click on the video title to take the test online. **RESULTS ARE IMMEDIATE.** Missing the test? Contact us at 800-223-6569 during our business hours of 7:00 a.m. – 4:00 p.m. MST to add it to your account.

Gordon J. Christensen Practical Clinical Courses, 3707 North Canyon Road, Suite 3D, Provo, UT 84604  
Toll Free (800) 223-6569 or Utah Residents (801) 226-6569

The techniques and procedures on this videotape are intended to be suggestions only. Any licensed practitioner viewing this presentation must make his or her own professional decisions about specific treatment for patients. PCC is not responsible for any damages or other liabilities (including attorney's fees) resulting, or claimed to result in whole or in part, from actual or alleged problems arising out of the use of this presentation.

## PROGRAM

### **V3531 Successful Isolation of Operating Fields**

#### CLINICIAN RESPONSIBLE:

**Gordon J. Christensen, DDS, MSD, PhD**  
Founder and CEO, Practical Clinical Courses  
Senior Consultant & Previous CEO, CR Foundation  
Practicing Prosthodontist, Provo, Utah

#### GOALS & OBJECTIVES

At the completion of this video presentation, viewers should be able to:

1. State five reasons why and when a non-contaminated operating field is necessary.
2. Explain the responsibility of dental assistants for establishing and maintaining a non-contaminated operating field.
3. Describe methods to produce non-contaminated operating fields.
4. Describe absorption products.
5. Describe retraction and/or isolation products.
6. Describe suction products.
7. Describe suction/isolation products.
8. List five different clinical procedures for which a non-contaminated operating field is necessary.
9. Discuss whether or not a rubber dam is necessary for ALL operative dentistry.
10. Discuss maintaining an optimum operating field for crown cementation.
11. Discuss ways to create an optimum field when placing sealants.
12. Discuss whether or not a rubber dam should be mandatory when doing endodontics.
13. Discuss maintaining an optimum field when placing implants.
14. Discuss the necessity for a dry field when doing occlusal equilibration.
15. Describe the Isolite 3 device.
16. Compare the Isolite 3 device with the Mr. Thirsty device.
17. List several reasons why rubber dam is still the "gold standard" for producing a dry field.
18. Discuss the importance of proper use of high velocity evacuation (HVE).
19. List an adjunctive HVE holding device that is especially useful when working alone or for dental hygienists.
20. Make decisions on which concepts you want to incorporate into your practice.

## OVERVIEW

### **V3531 Successful Isolation of Operating Fields**

This topic is often neglected, since dentists and staff think they are using adequate procedures for operating field isolation. It is likely they are not doing so because there are innumerable relatively new devices and concepts. Among the topics included in this video are:

- Many reasons why and when a non-contaminated operating field is necessary
- Responsibilities of dental assistants for establishing and maintaining a non-contaminated operating field
- Methods to produce non-contaminated operating fields
- Absorption products
- Retraction and/or isolation products
- Suction products
- Suction/isolation products
- Numerous clinical procedures for which a non-contaminated operating field is necessary
- Whether or not a rubber dam is necessary for ALL operative dentistry
- Maintaining an optimum operating field for crown cementation
- Ways to create an optimum field when placing sealants
- Whether or not a rubber dam should be mandatory when doing endodontics
- Maintaining an optimum field when placing implants
- The necessity for a dry field when doing occlusal equilibration
- The Isolite 3 device
- A comparison of the Isolite 3 device with the Mr. Thirsty device
- Several reasons why rubber dam is still the “gold standard” for producing a dry field
- The importance of proper use of high velocity evacuation (HVE)
- An adjunctive HVE holding device that is especially useful when working alone or for dental hygienists
- Making decisions on which concepts you want to incorporate into your practice

## POST-TEST

### **V3531 Successful Isolation of Operating Fields**

1. When is a non-contaminated operating field necessary?
  - a. restorative treatment
  - b. surgical treatment
  - c. preventive procedures
  - d. all the above
  
2. Which person is **primarily** responsible for making and maintaining a non-contaminated operating field?
  - a. dentist
  - b. dental assistant
  - c. dental hygienist
  - d. all the above
  
3. Absorptive products are:
  - a. the best operating field concept.
  - b. minimally effective, but necessary.
  - c. always containing cellulose.
  - d. none of the above.
  
4. Rubber dam (as shown in this video):
  - a. is less effective than other concepts.
  - b. is long out of date and has been replaced.
  - c. retracts lips, cheeks, and tongue better than other concepts.
  - d. cannot be completely replaced by other devices.
  
5. All suction devices are:
  - a. connected to HVE.
  - b. connected to saliva ejectors.
  - c. disposable.
  - d. none of the above.
  
6. Sealants:
  - a. are highly successful clinically.
  - b. cannot be improved in clinical success.
  - c. often fail in a few years because of plaque-contaminated operating fields.
  - d. should always use materials designated as sealants.
  
7. Restoration of anterior teeth:
  - a. always requires use of a rubber dam.
  - b. can be isolated relatively easily by using an OptraGate.
  - c. does not require a non-contaminated operating field.
  - d. can easily be isolated using an Isolite 3.

**POST-TEST (CONT'D)**

**V3531 Successful Isolation of Operating Fields**

- 8. Implant osteotomies and implant placement require:
  - a. moisture when accomplished.
  - b. water on doing the osteotomy.
  - c. blood presence when placing the implant.
  - d. all the above.
  
- 9. **Optimum** marking of teeth for occlusal equilibration:
  - a. does not require a dry field.
  - b. requires a dry field.
  - c. can be done easily by using wax to show high spots.
  - d. is usually done correctly.
  
- 10. Rubber dam:
  - a. retracts cheeks, tongue, and lips.
  - b. retracts gingival tissues.
  - c. is still the "gold standard" for *some* procedures.
  - d. all the above.
