PRACTICAL CLINICAL COURSES

PROCEDURE FOR RECEIVING
ACADEMY OF GENERAL DENTISTRY
AND STATE CREDIT
FOR CE VIDEOS

1. Complete the enclosed Post-Test. For each **CE Video Purchased**, one test is included. If additional tests are needed, the following fees will apply: \$25 per test per dentist (limit 1 additional dentist per video purchased); \$10 per test per auxiliary (dental assistants, hygienists, lab technicians - no limit on auxiliary tests). Fees can be paid either by check or credit card when tests are submitted to Practical Clinical Courses.
2. Complete the demographic information located at the end of the test.
Type of Credit:
 - a. If the applicant selects "AGD," PCC will send notification to both the applicant and the Academy of General Dentistry. (The AGD will also notify applicant of credits earned by printout information.)
 - b. If the applicant selects "State," PCC will send a certificate of verification to the applicant. The applicant must then submit this certificate to his/her state board to obtain credit.
 - c. If the applicant selects "Both," PCC will complete a. & b. above.
3. Return the **Post-Test portion** via mail, fax, or email. Our contact information is as follows:

Practical Clinical Courses
3707 N Canyon Road
Suite 3D
Provo, UT 84604
Fax: (801) 226-8637
info@pccdental.com

4. Practical Clinical Courses will correct the Post-Test. **Passing scores are 70% or higher.**

The techniques and procedures on this videotape are intended to be suggestions only. Any licensed practitioner viewing this presentation must make his or her own professional decisions about specific treatment for patients. PCC is not responsible for any damages or other liabilities (including attorney's fees) resulting, or claimed to result in whole or in part, from actual or alleged problems arising out of the use of this presentation.

PROGRAM

V1958 Posts, Cores, and Build-Ups - Predictable & Strong

CLINICIAN RESPONSIBLE:

Gordon J. Christensen, DDS, MSD, PhD

CEO, Practical Clinical Courses

CEO, CR Foundation

Practicing Prosthodontist, Provo, Utah

GOALS & OBJECTIVES

At the completion of this video presentation, participants should be able to accomplish the following:

1. Discuss the importance of posts, cores, and build-ups in general practice.
2. Discuss the significance of the aging population to endodontic treatment and fixed prosthodontics.
3. State when questionable teeth that have had endodontic treatment should be retained.
4. List when posts and cores should be placed.
5. List the factors that dictate whether or not a post and core should be placed.
6. Discuss the main types of posts currently available.
7. Compare the success of fiber-reinforced resin-based composite posts with metal posts.
8. Discuss and draw an acceptable ferrule for endodontically treated teeth.
9. Describe crown lengthening with a scalpel, electrosurgery, or laser.
10. Describe crown lengthening accomplished by bone removal.
11. Compare the cost of posts.
12. Describe the optimum length of posts into endodontically treated teeth.
13. Describe the optimum width (diameter) of fiber-reinforced resin-based composite posts.
14. Discuss need for posts and quantity of posts for multi-rooted teeth.
15. Compare build-up materials.
16. Discuss differences in tooth preparations for the most popular crown types.
17. Discuss and compare cements for posts.
18. Compare strength of teeth with bonded build-ups with endodontically treated teeth.
19. List the technique for post placement after endodontic treatment.
20. Discuss post placement in an endodontically treated tooth when a crown on the suspect tooth does not require removal.

OVERVIEW

V1958 Posts, Cores, and Build-Ups - Predictable & Strong

This presentation is intended to update practitioners on the newest and best post, core, and build-up concepts in the profession. The following and other topics are included:

- The importance of fixed prosthodontics in general practice
- The significance of the aging population
- Endodontics for questionable teeth
- When to use posts
- The significance of the amount of remaining tooth structure
- Occlusal considerations
- The significance of many missing teeth
- The significance when endodontically treated teeth serve as abutments
- Crown-down technique significance to post and core
- Types of posts
- Research on post types
- Ferrule requirements
- Crown lengthening soft-tissue only
- Crown lengthening hard-tissue
- Cost of posts
- Length necessity for posts
- Width relationship to strength of posts
- Posts in multi-rooted teeth
- Bonding materials and posts
- Build-up materials
- Tooth preparations related to specific crown types
- Cement for posts
- Tooth strength with and without posts
- Demonstration of post and core for new crowns
- Demonstration of post and core for previously placed crowns

POST TEST

V1958 Posts, Cores, and Build-Ups - Predictable & Strong

1. Posts and cores for endodontically treated teeth:
 - a. are not necessary most of the time.
 - b. are necessary and desirable some of the time.
 - c. do not add strength to the overall tooth/crown complex.
 - d. should be used on all endodontically treated teeth.

2. Factors that relate to whether or not a post is necessary are:
 - a. remaining tooth structure.
 - b. occlusion.
 - c. number of remaining teeth.
 - d. all of the above.

3. When questionable endodontically treated teeth that are symptomatic are present, it is best to:
 - a. place a post and core anyway and await the discomfort to subside.
 - b. redo the endodontic treatment and then place the post and core.
 - c. redo the endodontic treatment, wait until symptoms subside, and then place the post and core.
 - d. always extract the tooth.

4. Crown-down endodontic technique:
 - a. can remove too much coronal tooth structure.
 - b. usually makes the situation better for placement of posts and cores.
 - c. should be opened widely to allow excellent visual access to the root canal structure.
 - d. should be avoided because it is too aggressive.

5. Fiber-reinforced resin-based composite posts:
 - a. provide a stronger tooth/build-up/post complex than metal posts.
 - b. provide a much weaker tooth/build-up/post complex than metal posts.
 - c. provide about the same strength tooth/build-up/post complex as metal posts.
 - d. should have as minimal diameter as possible.

6. The most popular posts at this time are:
 - a. custom cast posts.
 - b. fiber-reinforced resin-based composite posts.
 - c. fiber-reinforced resin-based composite posts and titanium alloy posts.
 - d. fiber-reinforced resin-based composite posts and pure titanium alloy posts.

7. It was suggested that endodontically treated teeth should have at least ___ mm of remaining tooth structure from the gingival margin to form a ferrule effect.
 - a. 2
 - b. ½
 - c. 1
 - d. 3

POST TEST (CONT'D)

V1958 Posts, Cores, and Build-Ups - Predictable & Strong

8. If the optimum amount of tooth structure for an optimum ferrule effect is not present, the following should be done:
- a. place the post and core anyway.
 - b. do a soft and/or hard tissue crown lengthening.
 - c. place a custom cast post and core.
 - d. cut away the gingival tissues with a scalpel, electrosurgery, or laser to the bone level.
9. The length of the post into the root canal channel should be:
- a. $\frac{1}{4}$ of the bony supported length of the root.
 - b. $\frac{2}{3}$ of the way down the root canal.
 - c. to about the level of the cemento-enamel junction.
 - d. about $\frac{1}{2}$ of the length of the bony supported length of the root.
10. This presentation used _____ for post cementation.
- a. self-cure resin cement
 - b. resin-modified glass ionomer cement
 - c. self-etching resin cement
 - d. dual-cure self-adhesive resin cement
