PRACTICAL CLINICAL COURSES

PROCEDURE FOR RECEIVING
ACADEMY OF GENERAL DENTISTRY
AND STATE CREDIT
FOR CE VIDEOS

1. Complete the enclosed Post-Test. For each **CE Video Purchased**, one test is included. If additional tests are needed, the following fees will apply: \$25 per test per dentist (limit 1 additional dentist per video purchased); \$10 per test per auxiliary (dental assistants, hygienists, lab technicians - no limit on auxiliary tests). Fees can be paid either by check or credit card when tests are submitted to Practical Clinical Courses.
2. Complete the demographic information located at the end of the test.
Type of Credit:
 - a. If the applicant selects "AGD," PCC will send notification to both the applicant and the Academy of General Dentistry. (The AGD will also notify applicant of credits earned by printout information.)
 - b. If the applicant selects "State," PCC will send a certificate of verification to the applicant. The applicant must then submit this certificate to his/her state board to obtain credit.
 - c. If the applicant selects "Both," PCC will complete a. & b. above.
3. Return the **Post-Test portion** via mail, fax, or email. Our contact information is as follows:

Practical Clinical Courses
3707 N Canyon Road
Suite 3D
Provo, UT 84604
Fax: (801) 226-8637
info@pccdental.com

4. Practical Clinical Courses will correct the Post-Test. **Passing scores are 70% or higher.**

The techniques and procedures on this videotape are intended to be suggestions only. Any licensed practitioner viewing this presentation must make his or her own professional decisions about specific treatment for patients. PCC is not responsible for any damages or other liabilities (including attorney's fees) resulting, or claimed to result in whole or in part, from actual or alleged problems arising out of the use of this presentation.

PROGRAM

V2391 Diagnosis and Treatment of Failing Implants

CLINICIANS RESPONSIBLE:

Jon B. Suzuki, DDS, PhD, MBA

Professor of Microbiology and Immunology, Temple University
Professor of Periodontology and Oral Implantology, Temple University
Associate Dean for Graduate Education, Temple University
Director of Graduate Periodontology and Oral Implantology, Temple University

Gordon J. Christensen, DDS, MSD, PhD

CEO, Practical Clinical Courses
CEO, CR Foundation
Practicing Prosthodontist, Provo, Utah

GOALS & OBJECTIVES

At the completion of this video presentation, viewers should be able to:

1. List factors that may contribute to root-form implant failure.
2. Describe peri-implant mucositis.
3. Describe peri-implantitis.
4. Discuss the relationship of medical conditions to implant failures.
5. Discuss the relationship of medications to implant failures.
6. List the levels of peri-implant disease.
7. Discuss the characteristics of early peri-implant disease.
8. Discuss the characteristics of moderate peri-implant disease.
9. Discuss the characteristics of advanced peri-implant disease.
10. Discuss the Suzuki instrument kit for GPs.
11. Discuss the Suzuki instrument kit for periodontists or advanced GPs.
12. Describe treatment for early peri-implant disease.
13. Describe treatment for moderate peri-implant disease.
14. Describe treatment for advanced peri-implant disease.
15. Discuss use of antibiotics when treating failing implants.
16. Discuss instruments and materials to remove debris from failing implants.
17. Discuss when to remove an implant.
18. Discuss how to remove an implant.
19. Discuss patient oral hygiene for treated failing implants.
20. Discuss dental hygienist maintenance for treated failing implants.

OVERVIEW

V2391 Diagnosis and Treatment of Failing Implants

When root-form implants were first introduced to the profession, it appeared that they were going to be *the* ideal tooth replacement. However, as over 30 years have passed, peri-implant mucositis and peri-implantitis resembling the same disease characteristics as periodontal disease around natural teeth are being observed.

This presentation includes the following topics:

- Peri-implant mucositis
- Peri-implantitis
- Impact of medical issues on implant failures
- Impact of medications on implant failures
- Early peri-implant disease
- Moderate peri-implant disease
- Advanced peri-implant disease
- Treatment for early peri-implant disease
- Treatment for moderate peri-implant disease
- Treatment for advanced peri-implant disease
- Surgical instruments
- Materials needed for treatment
- Medications
- Patient oral hygiene for treated failing implants
- Dental hygienist treatment for treated failing implants
- When to remove an implant

POST-TEST

V2391 Diagnosis and Treatment of Failing Implants

1. Which of the following can be factors contributing to implant failure?
 - a. Occlusion
 - b. Bisphosphonates
 - c. Smoking
 - d. All of the above

2. Treatment for moderate peri-implant disease is usually:
 - a. questionably successful.
 - b. surgical.
 - c. non-surgical.
 - d. difficult clinically.

3. Attempting to salvage a failing implant should be accompanied by:
 - a. thorough patient informed consent.
 - b. enhanced patient oral hygiene.
 - c. enhanced dental hygienist activity.
 - d. all of the above.

4. Treatment for early peri-implant disease is usually:
 - a. surgical.
 - b. non-surgical.
 - c. difficult clinically.
 - d. questionably successful.

5. Remove an implant when:
 - a. it is mobile.
 - b. it can be rotated.
 - c. suppuration is present.
 - d. one or all of the above.

6. Treatment for advanced peri-implant disease is usually:
 - a. not difficult.
 - b. highly predictable.
 - c. questionably successful.
 - d. non-surgical.

7. Which level of treatment for peri-implant disease requires bone grafting?
 - a. Early
 - b. Moderate
 - c. Advanced
 - d. None of the above

POST-TEST (CONT'D)

V2391 Diagnosis and Treatment of Failing Implants

- 8. Removal of the exposed threads on the failing implant:
 - a. is strongly recommended.
 - b. is controversial.
 - c. is a simple procedure.
 - d. does not contaminate the surgical field.

- 9. The material used to clean dental plaque from the failing implant is:
 - a. aluminum oxide.
 - b. titanium oxide.
 - c. glycine powder.
 - d. none of the above.

- 10. Removal of the plaque and debris from a failing implant is accomplished by:
 - a. rotating titanium bristle brushes.
 - b. abrasive powder used in an air polisher.
 - c. scalers.
 - d. all of the above.
