PRACTICAL CLINICAL COURSES

**PROCEDURE FOR RECEIVING
CE CREDIT FOR VIDEO COURSES**

1. Complete the enclosed Post-Test.* For each **CE Video Purchased**, one test is included. If additional tests are needed, the following fees will apply: \$25 per test for 1 additional dentist; \$10 per test for each auxiliary (dental assistants, hygienists, lab technicians - no limit on auxiliary tests). Fees can be paid either by check or credit card when tests are submitted to Practical Clinical Courses.
2. Complete the demographic information located at the end of the test.
Type of Credit:
 - a. If the applicant selects "AGD," PCC will submit credit information to the Academy of General Dentistry and confirmation to the applicant that it has been submitted (*the applicant may check their AGD transcript for verification – please allow 30 days*).
 - b. If the applicant selects "State," PCC will issue a certificate of verification to the applicant. The applicant must then submit this certificate to their state board to obtain credit.
 - c. If the applicant selects "Both," PCC will complete a. & b. above.
3. Return the **Post-Test portion** via mail, fax, or email. Our contact information is as follows:

Practical Clinical Courses
3707 N Canyon Road
Suite 3D
Provo, UT 84604
Fax: (801) 226-8637
info@pccdental.com

4. Practical Clinical Courses will correct the Post-Test. **Passing scores are 70% or higher.**

***TO OBTAIN CE CREDIT ONLINE:** Login or create an account on www.pccdental.com and select "My CE Tests" from the left-side menu. Click on the video title to take the test online. **RESULTS ARE IMMEDIATE.** Missing the test? Contact us at 800-223-6569 during our business hours of 7:00 a.m. – 4:00 p.m. MST to add it to your account.

The techniques and procedures on this videotape are intended to be suggestions only. Any licensed practitioner viewing this presentation must make his or her own professional decisions about specific treatment for patients. PCC is not responsible for any damages or other liabilities (including attorney's fees) resulting, or claimed to result in whole or in part, from actual or alleged problems arising out of the use of this presentation.

PROGRAM

V1119 Optimizing Digital Radiography – Solving Challenges

CLINICIANS RESPONSIBLE:

Karen A. Preston, MAEd, RDH, FHEA

Associate Professor – Dental Hygiene, Utah Valley University
Board of Directors, CR Foundation

Gordon J. Christensen, DDS, MSD, PhD

Founder & CEO, Practical Clinical Courses
Senior Consultant & Previous CEO, CR Foundation
Practicing Prosthodontist, Provo, Utah

GOALS & OBJECTIVES

At the completion of this video presentation, viewers should be able to:

1. List the challenges currently present in digital radiography.
2. Discuss the frequency of use of digital radiography in typical practices.
3. Compare the ROI of digital radiography with other dental procedures.
4. Discuss radiation protection procedures.
5. Compare the characteristics of current CMOS sensors.
6. Describe how to optimize the life expectancy of CMOS sensors.
7. Discuss sensor holders.
8. Compare control panel choices.
9. Discuss proper radiation exposure for specific types of patients.
10. List methods to improve quality of digital images.
11. Discuss the value of panoramic radiographs.
12. List reasons for errors in panoramic radiographs.
13. Discuss potential needs for maxillary sinus radiographs.
14. Discuss potential needs for TMJ radiographs.
15. Explain the need for extraoral bitewings.
16. List the major areas in dentistry needing cone beam.
17. Describe the clinical placement of sensors for all locations in the mouth.
18. Compare the image quality of analog radiographs and digital radiographs.
19. Discuss differences in radiation need for radiographs of children, large adults, and small adults.
20. List the advantages of digital radiographs over analog radiographs.

OVERVIEW

V1119 Optimizing Digital Radiography – Solving Challenges

Digital radiography has now been in dentistry over two decades, and some improvements have been made since that time. The radiographs made with this technology have some advantages over analog radiology, but also some serious limitations. The following subjects are included in this presentation:

- Challenges currently present in digital radiography
- Frequency of use of digital radiography in typical practices
- ROI of digital radiography with other dental procedures
- Radiation protection procedures
- Characteristics of current CMOS sensors
- How to optimize the life expectancy of CMOS sensors
- Sensor holders
- Control panel choices
- Proper radiation exposure for specific types of patients
- Methods to improve quality of digital images
- Value of panoramic radiographs
- Reasons for errors in panoramic radiographs
- Potential needs for maxillary sinus radiographs
- Potential needs for TMJ radiographs
- Explain the need for extraoral bitewings
- Major areas in dentistry needing cone beam
- Clinical placement of sensors for all locations in the mouth
- Image quality of analog radiographs and digital radiographs
- Differences in radiation need for radiographs of children, large adults, and small adults
- Advantages of digital radiographs over analog radiographs

POST-TEST

V1119 Optimizing Digital Radiography – Solving Challenges

1. Which of the following is NOT a challenge with digital radiography?
 - a. Thick sensors
 - b. Rigid sensors
 - c. Storage of data
 - d. Relatively short life expectancy of sensors

2. A typical general practice dental office makes at least ____ images per day.
 - a. 20 to 40
 - b. 30 to 100
 - c. 60 to 100
 - d. 100 to 1,000

3. Return on investment of digital radiographs after buying the machine is:
 - a. about the same as other dental procedures.
 - b. lower than other procedures.
 - c. not constant nor predictable.
 - d. among the highest of all procedures.

4. Lead aprons for radiation protection are:
 - a. known to be necessary.
 - b. now claimed to be elective by the ADA.
 - c. necessary only for children.
 - d. to be discontinued.

5. Images made from CMOS sensors:
 - a. are more accurate than analog film.
 - b. are less accurate than film.
 - c. are easier to make than analog.
 - d. require longer time to make.

6. Proper radiation exposure is:
 - a. the same for all body sizes.
 - b. more for children.
 - c. more for females.
 - d. variable from patient to patient.

7. Panoramic radiographs:
 - a. can't be made on a cone beam.
 - b. require more radiation than a full-mouth series.
 - c. are potentially your most educative concept.
 - d. are difficult to make.

POST-TEST (CONT'D)

V1119 Optimizing Digital Radiography – Solving Challenges

- 8. Extraoral radiographs:
 - a. can be made only on a cone beam device.
 - b. show all of the teeth similar to a panoramic radiograph.
 - c. are acceptable for screening and determining presence of moderate caries.
 - d. require more radiation than an analog panoramic.

- 9. Cone beam images:
 - a. are not necessary in most general practices.
 - b. show about the same information as analog panoramic images.
 - c. are ranked to be the most necessary current technology.
 - d. are about \$25,000 to purchase.

- 10. Some of the main advantages of digital images include:
 - a. easy storage and retrieval.
 - b. low radiation.
 - c. requires no solutions.
 - d. all of the above.
