PRACTICAL CLINICAL COURSES

**PROCEDURE FOR RECEIVING
CE CREDIT FOR VIDEO COURSES**

1. Complete the enclosed Post-Test.* For each **CE Video Purchased**, one complimentary test is included. Additional tests are \$35/person per test. Fees can be paid by check or with a credit card when submitting tests to Practical Clinical Courses. If more than 10 CE tests are required per video, please contact us at 800-223-6569.
2. Complete the demographic information located at the end of the test.
Type of Credit:
 - a. If the applicant selects "State," PCC will issue a certificate of verification to the applicant. The applicant must then submit this certificate to their state board to obtain credit.
 - b. If the applicant selects "AGD," PCC will submit credit information to the Academy of General Dentistry and confirmation to the applicant that it has been submitted (*the applicant may check their AGD transcript for verification – please allow 30 days*).
 - c. If the applicant selects "Both," PCC will complete a. & b. above.
3. Return the **Post-Test portion** via mail, fax, or email. Our contact information is as follows:

Practical Clinical Courses
3707 N Canyon Road
Suite 3D
Provo, UT 84604
Fax: (801) 226-8637
cetests@pccdental.com

4. Practical Clinical Courses will correct the Post-Test. **Passing scores are 70% or higher.**

****TO OBTAIN CE CREDIT ONLINE:*** Login or create an account on www.pccdental.com and select "My CE Tests" from the left-side menu. Click on the video title to take the test online. **RESULTS ARE IMMEDIATE.** Missing the test? Contact us at 800-223-6569 during our business hours of 7:00 a.m. – 4:00 p.m. MST to add it to your account.

The techniques and procedures on this videotape are intended to be suggestions only. Any licensed practitioner viewing this presentation must make his or her own professional decisions about specific treatment for patients. PCC is not responsible for any damages or other liabilities (including attorney's fees) resulting, or claimed to result in whole or in part, from actual or alleged problems arising out of the use of this presentation.

PROGRAM

V5143 Sealants and Preventive Resin Restorations – When & How

CLINICIAN RESPONSIBLE

Gordon J. Christensen, DDS, MSD, PhD

Founder and CEO, Practical Clinical Courses

Senior Consultant & Previous CEO, CR Foundation

Practicing Prosthodontist, Provo, Utah

GOALS & OBJECTIVES

At the completion of this video presentation, participants should be able to accomplish the following:

1. Discuss the incidence of dental caries in 3rd grade children.
2. Discuss the difficulty of seeing initial dental caries using radiographs.
3. Discuss the difficulty of seeing initial dental caries using electronic devices.
4. Describe the weaknesses and strengths of caries detection by the DIAGNOdent.
5. Discuss the percentage of sealant retention to teeth at 5 years of service.
6. List three potential reasons for premature sealant failure.
7. Define how an air slurry polisher works.
8. Define how an air abrasion unit works.
9. Discuss methods to overcome the three major reasons for premature sealant failure.
10. Discuss the financial implications of having dentists place sealants vs. dental assistants or dental hygienists.
11. Discuss the characteristics of teeth that should receive sealants.
12. Discuss the characteristics of teeth that should receive preventive resin restorations.
13. List the steps in the described sealant procedure.
14. List the steps in the described preventive resin procedure.
15. Discuss three significant effects of using glutaraldehyde/HEMA solutions on teeth.
16. Discuss differences in the preventive resin restoration technique between self-etching and etch and rinse bonding agents.
17. Discuss the necessary precautions when using a fast (3-5 second) curing light.
18. List the differences in the sealant technique described in this video and the standard sealant procedure.
19. List the differences in the preventive resin restoration technique described in this video and the standard preventive resin procedure.
20. Discuss the longevity potential of the techniques described in this video compared to conventional techniques.

OVERVIEW

V5143 Sealants and Preventive Resin Restorations – When & How

Sealants are an everyday procedure in most general and pediatric dental offices. However, many of them are placed without removing plaque from occlusal grooves and fissures. Also, most dentists use sealant materials which have high polymerization shrinkage and wear significantly during service. This video presents several methods to reduce the premature failure of the reported 50% of sealants at 5 years of service, demonstrates the suggested techniques, and makes practice management suggestions for sealants and preventive resin restorations. The following topics are included:

- Tooth occlusal anatomy
- Caries detection using radiographs, visual observation, and electronic devices
- Air slurry polishers
- Air abrasion and hydroabrasion units
- The weakness of most current sealants
- Overcoming the weaknesses of current sealant techniques
- Removing plaque, calculus, and stain using air abrasion units
- What is a sealant?
- What is a preventive resin restoration?
- Use of disinfectants and desensitizers when placing sealants
- Cost effectiveness of sealants vs. preventive resin restorations
- A comparison of the clinical techniques for sealants, preventive resin restorations, and conventionally prepared restoration
- Sealant materials vs. fully filled restorative resins
- Differences among sealants, preventive resin restorations, and conventional-sized resin restorations related to desired material physical characteristics
- The step-by-step sealant procedure
- The step-by-step preventive resin procedure
- Longevity of these restorations
- Upkeep of sealants

POST-TEST

V5143 Sealants and Preventive Resin Restorations – When & How

1. The three types of occlusal restorations discussed in this video were:
 - a. Class II resins, Class III restorations, sealants.
 - b. Class I restorations, Class II restorations, preventive resin restorations.
 - c. Class I restorations, sealants, preventive resin restorations.
 - d. none of the above.

2. About 80% of the dental caries of childhood occur:
 - a. on the proximal tooth surfaces.
 - b. on the occlusal tooth surfaces.
 - c. on the facial and lingual surfaces of the teeth.
 - d. in the anterior part of the mouth.

3. To have the DIAGNOdent record caries relatively accurately _____ must be removed.
 - a. plaque
 - b. tooth stain
 - c. dental caries
 - d. saliva

4. Initial dental carious lesions on tooth occlusal surfaces are:
 - a. present only after one year after tooth eruption.
 - b. very difficult to detect.
 - c. easily detected.
 - d. detected easily with an explorer.

5. Air abrasion may be accomplished legally by:
 - a. dentists and any qualified staff person.
 - b. dental hygienists.
 - c. dental assistants.
 - d. a dentist.

6. Air slurry polishers may not be used legally by:
 - a. dentists and any qualified staff person.
 - b. dental hygienists.
 - c. dental assistants.
 - d. none of the above.

7. Preventive resin restorations are classified for third-party payment as:
 - a. sealants.
 - b. Class II restorations.
 - c. Class I restorations.
 - d. Class III restorations.

POST-TEST (CONT'D)

V5143 Sealants and Preventive Resin Restorations – When & How

- 8. Sealants cost patients approximately _____ times less than preventive resin restorations.
 - a. 2
 - b. 3
 - c. 4
 - d. 5

- 9. Glutaraldehyde/HEMA solutions:
 - a. disinfect.
 - b. desensitize.
 - c. are compatible with restorative resins.
 - d. all of the above.

- 10. It was suggested that sealants may be accomplished using _____ as the total sealant material.
 - a. conventional resin-based composite restorative material
 - b. unfilled bonding material
 - c. the primer of any bonding agent
 - d. the acid etch of a generation 4 bonding material
